

Combat Pill Pack

- For the conscious casualty requiring pain control, if the soldier is able to continue to fight, consider the use of oral pain meds that will not alter the level of consciousness. Celebrex® 200mg or Meloxicam (Mobic®) 15mg orally daily with 1000 mg of Tylenol® every 6 hours will be sufficient to control moderate pain. These medications along with an oral antibiotic will make up the soldiers "*Combat Pill Pack*." Soldiers will be instructed to take this pack when they sustain a penetrating wound on the battlefield

Combat Pill Pack

Pain Control

- Able to fight
